

# PLUG PROPAGATION

Lawyer Nursery has three modern greenhouses operating at our Olympia, Washington nursery. Our greenhouse production in Olympia began in 2002. The space has grown to 10,000 square feet of heated greenhouse and 8,000 square feet of shade structure. Production this year will exceed 900,000 plugs spread over more than 40 species. Our greenhouses are equipped with lights for photoperiod control, roll up side curtains for ventilation and traveling booms for irrigation, fertilization and nutrient supplementation.

Our greenhouse facilities are an important addition to Lawyer Nursery's production. Our hard working staff plans to expand these operations as our customers experience the merits of plug-grown plants and a plug transplant compared to a bareroot seedling transplant. Please let us know of crops or sizes you are needing. Providing stock for the changing trends in the industry remains both a challenge and an opportunity.

## Benefits of Plugs

- Fast rooting time
- Great transplant success
- Excellent root system
- Actively growing plant
- Uniform sizing
- Extended shipping season
- Less inventory fluctuation

*Populus tremuloides* plugs.

*Gaultheria procumbens* plug.

## Broadleaf Plugs Available for Sale

*Acer buergerianum* (pg. 3)

*Acer davidii* (pg. 3)

**(for conifer plugs see page 46)**

Lawyer Nursery offers plugs in a variety of container types and sizes. Specific details of the container used for each product is available from our sales staff and will be noted in our inventory as the information is available. Any height noted for this material is to indicate expected growth and will not be used as a grading standard nor is it guaranteed in any form. Plugs are generally extracted prior to shipping. Contact Lawyer Nursery for potential shipping schedules of individual plug crops.
